

I.<概要>

本標準では、IP 電話サービスの総合品質指標として ITU-T 勧告 G.107[1]に準拠した R 値を用いることを前提として、この算出のためにサービス提供事業者が考慮すべき品質パラメータを特定し、その評価法を規定する。品質パラメータや評価法に関しては、該当する ITU-T 勧告に準拠することを基本とし、国際標準化との整合を図ることとする。

さらに、本標準では、ITU-T 勧告 G.107[1]が考慮していない品質要因がある点、R 値と主観品質の対応関係に関する検証が必ずしも十分でない点を鑑み、R 値を補完する品質パラメータ及びその評価方法も規定する。

I.<Overview>

The purpose of this standard

- taking account of the standardization trends of ITU-T and other organizations, to define a method of assessment with the overall quality index, the R value, specified in the ITU Recommendation G.107 as the overall quality index for IP telephony services and a method of assessment of parameters to complement the R value*.

TTC Study Policies

- In principle, make sure that the standard conforms to related international/regional standards (ITU-T, ETSI, and TIA standards).
- Use the overall quality index, the R value, for IP telephony services.
- Specify evaluation conditions and method of assessment for the calculation of the R value.
- In defining conditions and method of assessment, ensure the ease of assessment and fairness (strictness).

* The R value is the index calculated based on the E-Model, which has been developed as a network planning tool. Because of the facts that there are quality factors that cannot be assessed with the R value and that the verification of the correspondence between the R value and subjective qualities has not been completed, parameters to complement the evaluation based on the R value are necessary, so is a method of their assessment.
