JS-10613-b

Profile for Intermediate System between Frame Relay Data Network (FRDN)/PVC and Lacal Area Networks(LAN)

<Reference>

1. Relations with international standards

1) This standard describes the lower layer profile for the intermediate system between Frame Relay Data Network (FRDN)/PVC and Lacal Area Networks(LAN). The profile is related to International Standard Profile (ISP) for which the identifier named RA51.61221, RA53.61221, RA54.61221 was assigned in TR10000-2 of ISO/IEC although the relevant ISP itself has not been developed.

2) The profile designated in this standard is based on the following international standards.

ITU-T Recommendations:

X.36

ISO Standards:

ISO 8473, ISO 9542, ISO/IEC 10589, ISO/IEC 10747

2. Summary of departures from international standards

None

3. Relations with other domestic standards

1) The profile designated in this standard was developed in cooperation with Interoperability Technology Association for Information Processing Japan (INTAP) and has technical consistency with that specified in the following document produced by INTAP.

- Implementation Specifications for OSI Lower Layers RAJ (V4.0)
