oneM2M 技術仕様書一要求条件 [oneM2M Technical Specification - Requirements]

<参考> [Remarks]

英文記述の適用レベル [Application level of English description]
 適用レベル [Application level]: E2
 本標準の本文、付属資料および付録の文章および図に英文記述を含んでいる。
 [English description is included in the text and figures of main body, annexes and appendices.]

2. 国際勧告等の関連 [Relationship with international recommendations and standards] 本標準は、oneM2M で承認された Technical Specification 0002V3.1.2 に準拠している。

[This standard is standardized based on the Technical Specification 0002 (V3.1.2) approved by oneM2M.]

3. 上記国際勧告等に対する追加項目等 [Departures from international recommendations]

原標準に対する変更項目 [Changes to original standard]

原標準が参照する標準のうち、TTC 標準に置き換える項目。

[Standards referred to in the original standard, which are replaced by TTC standards.] 原標準が参照する標準のうち、それらに準拠した TTC 標準等が制定されている場合は自動的に 最新版 TTC 標準等に置き換え参照するものとする。

[Standards referred to in the original standard should be replaced by derived TTC standards.]

#### 4. 工業所有権 [IPR]

本標準に関わる「工業所有権等の実施の権利に係る確認書」の提出状況は、TTCホームページによる。 [Status of "Confirmation of IPR Licensing Condition" submitted is provided in the TTC web site.]

| ONEM2M<br>TECHNICAL SPECIFICATION |   |  |  |
|-----------------------------------|---|--|--|
| Document Number                   | TS-0002-V3.1.2  |  |  |
| Document Name:                    | Requirements  |  |  |
| Date:                             | 2019-02-25  |  |  |
| Abstract:                         | The present document contains an informative functional role model and normative technical requirements for oneM2M. |  |  |

This Specification is provided for future development work within oneM2M only. The Partners accept no liability for any use of this Specification.

The present document has not been subject to any approval process by the oneM2M Partners Type 1. Published oneM2M specifications and reports for implementation should be obtained via the oneM2M Partners' Publications Offices.

#### About oneM2M

The purpose and goal of oneM2M is to develop technical specifications which address the need for a common M2M Service Layer that can be readily embedded within various hardware and software, and relied upon to connect the myriad of devices in the field with M2M application servers worldwide.

More information about oneM2M may be found at: http://www.oneM2M.org

# 1 Scope

The present document contains an informative functional role model and normative technical requirements for oneM2M.

# 2 References

### 2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

The following referenced documents are necessary for the application of the present document.

[1] 3GPP TS 22.368: "Service requirements for Machine-Type Communications (MTC); Stage 1".

### 2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

## 3 Definition of terms and abbreviations

### 3.1 Terms

For the purposes of the present document, the terms given in oneM2M TS-0011 [i.2] apply.

### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

| AE   | Application Entity                                  |
|------|---|
| API  | Application Program Interface                       |
| BBF  | BroadBand Forum                                     |
| CHA  | Continua Health Alliance                            |
| CPU  | Central Processing Unit                             |
| DM   | Device Management                                   |
| GBA  | Generic Bootstrapping Architecture                  |
| GSMA | Global System for Mobile Communications Association |
| GW   | GateWay   |
| HGI  | Home Gateway Initiative                             |
| HSM  | Hardware Security Module                            |

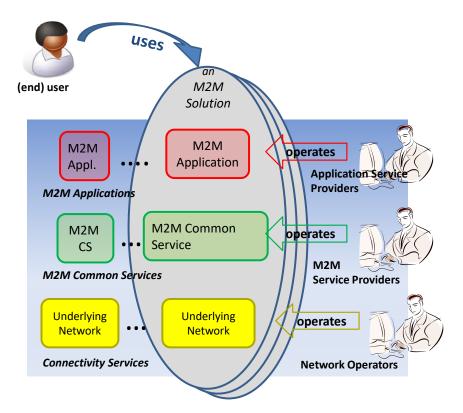

| IP   | Internet Protocol                       |
|------|---|
| MTC  | Machine Type Communications             |
| OMA  | Open Mobile Alliance                    |
| OSR  | Overall System Requirements             |
| OWL  | Web Ontology Language                   |
| QoS  | Quality of Service                      |
| RDF  | Resource Description Framework          |
| SMS  | Short Message Service                   |
| UICC | Universal Integrated Circuit Card       |
| USIM | UMTS Subscriber Identity Module         |
| USSD | Unstructured Supplementary Service Data |
| WAN  | Wide Area Network                       |
| WLAN | Wireless Local Area Network             |

# 4 Conventions

The key words "Shall", "Shall not", "May", "Need not", "Should", "Should not" in the present document are to be interpreted as described in the oneM2M Drafting Rules [i.1].

# 5 Introduction to the M2M ecosystem

## 5.1 Functional roles description

#### Figure 1: Functional Roles in the M2M Ecosystem

- 1) The User (individual or company aka: end-user) fulfils all of the following criteria:
  - Uses an M2M solution.
- 2) The Application Service Provider fulfils all of the following criteria:

- Provides an M2M Application Service.
- Operates M2M Applications.
- 3) The M2M Service Provider fulfils all of the following criteria:
  - Provides M2M Services to Application Service Providers.
  - Operates M2M Common Services.
- 4) The *Network Operator* fulfils all of the following criteria:
  - Provides Connectivity and related services for M2M Service Providers.
  - Operates an Underlying Network. Such an Underlying Network could e.g. be a telecom network.

Any of the above functional roles may coincide with any of the other roles. These functional roles do not imply business roles or architectural assumptions.

# 6 Functional Requirements

### 6.1 Overall System Requirements

#### **Table 1: Overall System Requirements**

| Requirement ID                      | Description   | Release                                   |
|-------------------------------------|---|---|
| OSR-001                             | The oneM2M System shall allow communication between M2M Applications by using multiple communication means based on IP access.  | Implemented<br>in Rel-1                   |
| OSR-002a                            | The oneM2M System shall support communication means that can accommodate devices with constrained computing (e.g. small CPU, memory, battery) or communication capabilities (e.g. 2G wireless modem, certain WLAN node).  | Implemented<br>in Rel-1                   |
| OSR-002b                            | The oneM2M System shall support communication means that can accommodate devices with rich computing capabilities (e.g. large CPU, memory) or communication (e.g. 3/4G wireless modem, wireline).   | Implemented<br>in Rel-1                   |
| OSR-003<br>See REQ-2015-<br>0626R01 | The oneM2M System shall support the ability to maintain application-to-<br>application communication in coordination with an application session for those<br>M2M Applications that require it.   | Not<br>implemented                        |
| OSR-004                             | The oneM2M System shall support session-less application communications for those M2M Applications that require it.   | Implemented<br>in Rel-1                   |
| OSR-005                             | The oneM2M System shall be able to expose the services offered by telecommunications networks to M2M Applications (e.g. SMS, USSD, localization, subscription configuration, authentication (e.g. Generic Bootstrapping Architecture), etc.),subject to restriction based on Network Operator's policy.   | Partially<br>implemented<br>(see note 9)  |
| OSR-006                             | The oneM2M System shall be able to reuse the services offered by Underlying<br>Networks to M2M Applications and/or M2M Services by means of open access<br>models (e.g. OMA, GSMA OneAPI framework). Examples of available services<br>are:<br>IP Multimedia communications.<br>Messaging.<br>Location.<br>Charging and billing services.<br>Device information and profiles.<br>Configuration and management of devices.<br>Triggering, monitoring of devices.<br>Small data transmission.<br>Group management.<br>(see note 1). | Partially<br>implemented<br>(see note 10) |
| OSR-007                             | The oneM2M System shall provide a mechanism for M2M Applications to interact with the Applications and data/information managed by a different M2M Service Provider, subject to permissions as appropriate.   | Implemented<br>in Rel-1                   |

| Requirement ID | Description  | Release                   |
|----------------|--|---------------------------|
| OSR-008        | The oneM2M System shall provide the capability for M2M Applications to   | Implemented               |
|                | communicate with an M2M Device (i.e. application in the device) without the need for the M2M Applications to be aware of the network technology and the  | in Rel-1<br>(see note 11) |
|                | specific communication protocol of the M2M Device.   |                           |
| OSR-009        | The oneM2M System shall support the ability for single or multiple M2M   | Implemented               |
|                | Applications to interact with a single or multiple M2M Devices/Gateways  | in Rel-1                  |
| 000 040        | (application in the device/gateway) (see note 2).  | lasalsas sats d           |
| OSR-010        | The oneM2M System shall support mechanisms for confirmed delivery of a message to its addressee to those M2M Applications requesting reliable            | Implemented<br>in Rel-1   |
|                | delivery to detect failure of message within a given time interval.  |                           |
| OSR-011a       | The oneM2M System shall be able to request different communication paths,  | Implemented               |
|                | from the Underlying Network based on Underlying Network Operator and/or  | in Rel-1                  |
| OSR-011b       | M2M Service Provider policies, routing mechanisms for transmission failures.<br>The oneM2M System shall be able to request different communication paths | (see note 12)<br>Not      |
| 0010110        | from the Underlying Network based on request from M2M Applications.  | implemented               |
| OSR-012        | The oneM2M System shall support communications between M2M Applications  | Implemented               |
|                | and M2M Devices supporting M2M Services by means of continuous or non-   | in Rel-1                  |
| OSR-013        | continuous connectivity.<br>The oneM2M System shall be aware of the delay tolerance acceptable by the  | Implemented               |
| 03K-013        | M2M Application and shall schedule the communication accordingly or request  | Implemented<br>in Rel-1   |
|                | the Underlying Network to do it, based on policies criteria.   |                           |
| OSR-014        | The oneM2M System shall be able to communicate with M2M Devices, behind  | Implemented               |
|                | an M2M Gateway that supports heterogeneous M2M Area Networks.<br>The oneM2M System shall be able to assist Underlying Networks that support              | in Rel-1                  |
| OSR-015        | different communication patterns including infrequent communications, small  | Partially<br>implemented  |
|                | data transfer, transfer of large file and streamed communication.  | (see note 13)             |
|                |  | · · · ·                   |
| OSR-016        | The oneM2M System shall provide the capability to notify M2M Applications of   | Implemented               |
|                | the availability of, and changes to, available M2M Application/management<br>information on the M2M Device/Gateway, including changes to the M2M Area    | in Rel-1                  |
|                | Network.   |                           |
| OSR-017        | The oneM2M System shall be able to offer access to different sets of M2M   | Implemented               |
|                | Services to M2M Application Providers. The minimum set of services are:  | in Rel-1                  |
|                | Connectivity management.     Device management (carries level management)  |                           |
|                | <ul> <li>Device management (service level management).</li> <li>Application Data management.</li> </ul>  |                           |
|                | In order to enable different deployment scenarios, these services shall be made  |                           |
|                | available by the oneM2M System, individually, as a subset or as a complete set   |                           |
| OSR-018        | of services.   | Implemented               |
| 05K-016        | The oneM2M System shall be able to offer M2M Services to M2M Devices roaming across cellular Underlying Networks, subject to restriction based on        | Implemented<br>with some  |
|                | Network Operator's policy (see note 3).  | limitations               |
|                |  | (see note 14)             |
| OSR-019        | The oneM2M System shall support the capabilities for data repository (i.e. to  | Implemented               |
|                | collect/store) and for data transfer from one or more M2M Devices or M2M Gateways, for delivery to one or more M2M Gateways, M2M Services                | in Rel-1                  |
|                | Infrastructure, or M2M Application Infrastructure, in ways requested by the M2M  |                           |
|                | Application Infrastructure as listed below:  |                           |
|                | action initiated either by an M2M Device, M2M Gateway, M2M     Services Infractive or M2M Application Infractives  |                           |
|                | <ul> <li>Services Infrastructure, or M2M Application Infrastructure;</li> <li>when triggered by schedule or event;</li> </ul>                            |                           |
|                | <ul> <li>for specified data.</li> </ul>  |                           |
| OSR-020        | The oneM2M System shall be able to support policies and their management   | Implemented               |

|                | M2M Service Subscriptions.   | in Rel-1                  |

| Requirement ID | Description   | Release                                   |
|----------------|---|---|
| OSR-026        | If provided by the Underlying Network, the oneM2M System shall be able to associate the M2M Device used by M2M Service Subscriptions with the device identifiers offered by the Underlying Network and the device.  | Implemented<br>in Rel-1                   |
| OSR-027        | The oneM2M System shall provide a generic mechanism to support transparent exchange of information between the M2M Application and the Underlying Network, subject to restriction based on M2M Service Provider's policy and/or Network Operator's policy (see note 5).   | Not<br>implemented                        |
| OSR-028        | The oneM2M System shall enable an M2M Application to define trigger conditions in the oneM2M System such that the oneM2M System autonomously sends a series of commands to actuators on behalf of the M2M Application when these conditions are met.  | Not<br>implemented                        |
| OSR-029        | The oneM2M System shall be able to support sending common command(s) to each actuator or sensor via a group.  | Implemented<br>in Rel-1                   |
| OSR-030        | The oneM2M System shall be able to support the management (i.e. addition, removal, retrieval and update) of the membership of a group.  | Implemented<br>in Rel-1                   |
| OSR-031        | The oneM2M System shall be able to support a group as a member of another group.  | Implemented<br>in Rel-1                   |
| OSR-032        | The oneM2M System shall be able to support Event Categories (e.g. normal, urgency) associated with data for M2M Applications when collecting, storing and reporting that data (see note 6).   | Implemented<br>in Rel-1                   |
| OSR-033        | Based on the Dynamic Device/Gateway Context of the M2M Gateway and/or<br>Device and the defined Event Categories, the oneM2M System shall provide<br>the capability to dynamically adjust the scheduling of reporting and notification<br>of the M2M Device/Gateway (see note 17).  | Partially<br>implemented<br>(see note 15) |
| OSR-034        | The oneM2M System shall support seamless replacement of M2M Devices as well as M2M Gateways (e.g. redirecting traffic, connection, recovery, etc.).   | Not<br>implemented                        |
| OSR-035        | The oneM2M System shall support the exchange of non-M2M Application related relevant information (e.g. Device/Gateway classes) between M2M Device/Gateway and M2M Service Infrastructure for the purpose of efficient communication facilitation. This includes the capability for an M2M Device to report its device class to M2M Service Infrastructure and for the M2M Service Infrastructure to inform M2M Device of the M2M Service Infrastructure capabilities. | Not<br>implemented                        |
| OSR-036        | The oneM2M System should provide mechanisms to accept requests from M2M Application Service Providers for compute/analytics services.   | Not<br>implemented                        |
| OSR-037        | The oneM2M System shall enable an M2M Application to request to send data, in a manner independent of the Underlying Network, to the M2M Applications of a group of M2M Devices and M2M Gateways in geographic areas that are specified by the M2M Application.   | Not<br>implemented                        |
| OSR-038        | The oneM2M System shall support the inclusion of M2M Application's QoS preference in service requests to Underlying Networks.   | Not<br>implemented                        |
| OSR-039        | The oneM2M System shall be able to authorize service requests with QoS preference at service level, but shall pass M2M Application's QoS preference in service requests to Underlying Network for authorization and granting or negotiation of the service QoS requests.  | Not<br>implemented                        |
| OSR-040        | The oneM2M System shall be able to leverage multiple communication mechanisms (such as USSD or SMS) when available in the Underlying Networks.  | Not<br>implemented<br>(see note 16)       |
| OSR-041        | The oneM2M System shall provide a mechanism, which supports the addition of new M2M Services to the oneM2M System as independent portable modules by means of the oneM2M interfaces.  | Partially<br>implemented<br>(see note 21) |
| OSR-042        | The oneM2M System shall be able to support different QoS-levels specifying parameters, such as guaranteed bitrate, delay, delay variation, loss ratio and error rate, etc.  | Not<br>implemented                        |
| OSR-043        | The oneM2M System shall be able to verify that members of a group support a common set of functions.  | Implemented<br>in Rel-1                   |
| OSR-044        | The oneM2M System shall support communication with M2M Devices which are reachable based on defined time schedules (e.g. periodic) as well as M2M Devices which are reachable in an unpredictable and spontaneous manner.   | Implemented<br>in Rel-1                   |
| OSR-045a       | The oneM2M System shall be able to receive and utilize information provided by the Underlying Network about when an M2M Device can be reached.  | Not<br>implemented                        |
| OSR-045b       | The oneM2M System shall be able to utilize reachability schedules generated by either the M2M Device or the Infrastructure Domain.  | Partially<br>implemented<br>(see note 18) |
| OSR-046        | The oneM2M System shall be able to support a capability for the M2M Application to request/disallow acknowledgement for its communication.  | Not<br>implemented                        |

| Requirement ID | Description   | Release                    |
|----------------|---|----------------------------|
| OSR-047        | The oneM2M System shall be able to support mechanism for the M2M Devices  | Implemented                |
|                | and/or Gateways to report their geographical location information to M2M  | in Rel-1                   |
| OSR-048        | Applications (see note 7).<br>The oneM2M System shall provide an M2M Service that allows M2M Devices  | Implemented                |
| U3K-040        | and/or Gateways to share their own or other M2M Devices' geographical   | Implemented<br>in Rel-1    |
|                | location information (see note 7).  |                            |
| OSR-049        | The oneM2M System shall be able to provide the capability for an M2M  | Implemented                |
|                | Application to selectively share data (e.g. access control) among applications.   | in Rel-1                   |
| OSR-050        | If communication over one communication channel provided by the Underlying  | Implemented                |
|                | Network can only be triggered by one side (Infrastructure Domain or Field   | in Rel-1                   |
|                | Domain), and alternative channel(s) is (are) available in the other direction, the  |                            |
|                | oneM2M System shall be able to use the alternative channel(s) to trigger  |                            |
| 000 054        | bidirectional communication on the first channel.   |                            |
| OSR-051        | Depending on availability of suitable interfaces provided by the Underlying   | Implemented<br>in Rel-1    |
|                | Network the oneM2M System shall be able to request the Underlying Network   | In Rel-1                   |
| OSR-052        | to broadcast/multicast data to a group of M2M Devices in a specified area.<br>The oneM2M System shall be able to select an appropriate Underlying Network | Not                        |
| 0311-032       | to broadcast or multicast data depending on the network's broadcast/multicast   | implemented                |
|                | support and the connectivity supported by the targeted group of M2M   | implemented                |
|                | Devices/Gateways.   |                            |
| OSR-053        | The oneM2M System shall provide a means that enables backward   | Not                        |
|                | compatibility of interfaces among different releases (see note 8).  | implemented                |
| OSR-054        | The oneM2M System shall be able to support an M2M Application, M2M  | Implemented                |
|                | Device, or M2M Gateway to obtain access to resources of another M2M   | in Rel-1                   |
|                | Application, M2M Device, or M2M Gateway.  |                            |
| OSR-055        | The oneM2M System shall be able to provide the capability of M2M  | Implemented                |
|                | Applications to exchange data with one or more authorized M2M Applications  | in Rel-1                   |
| 000 050        | which are not known in advance.   | (see note 20)              |
| OSR-056        | The oneM2M System shall enable discovery of usable M2M Applications on an   | Implemented                |
| OSR-057        | M2M Gateway or at an M2M Device.<br>The oneM2M System shall enable discovery of M2M Gateways and M2M  | in Rel-1<br>Implemented    |

|                | M2M Service Operational Status of an M2M Device changes, if that M2M  | (see note 19)              |
|                | Application has subscribed for such notifications.  |                            |

| Requirement ID | Description  | Release     |
|----------------|--|-------------|
| OSR-071        | The oneM2M System shall be able to enable an authorized M2M Application to       | Implemented |
|                | set the M2M Service Administrative State of a M2M Device.                        | in Rel-1    |
| OSR-072        | The oneM2M System shall be able to initiate a set of actions defined by a M2M    | Not         |
|                | Application (e.g. trigger upon a threshold, compare a value, ) that impacts      | implemented |
|                | another Application.   |             |
| OSR-073        | The oneM2M System shall support distributed transactions to multiple devices     | Not         |
| See REQ-2015-  | or applications where the transaction includes the characteristics of atomicity, | implemented |
| 0529R03        | consistency, isolation and durability.   |             |
| OSR-074        | The oneM2M System shall support the completion of distributed transactions to    | Not         |
| See REQ-2015-  | multiple devices or applications while maintaining the order of the operations   | implemented |
| 0529R03        | and performing the transaction within a given time frame.                        |             |
| OSR-75         | The oneM2M System shall be able to collect, store Time Series Data.              | Implemented |
| See REQ-2015-  |  | in Rel-2    |
| 0546R01        |  |             |
| OSR-76         | The oneM2M System shall be able to detect and report the missing data in time    | Implemented |
| See REQ-2015-  | series.  | in Rel-2    |
| 0546R01        |  |             |

| Requirement ID                      | Description  | Release                                   |
|-------------------------------------|--|---|
| OSR-077<br>See REQ-2015-<br>0558R01 | The oneM2M System shall be capable of collecting asynchronous responses pertaining to the broadcasted messages.  | Not<br>implemented                        |
| OSR-078<br>See REQ-2015-<br>573R01  | The oneM2M System shall support gateway-based capabilities for Event management, e.g. capability for arbitration of the resulting processing.  | Not<br>implemented                        |
| OSR-079<br>See REQ-2015-<br>574R01  | The oneM2M System shall provide the capability to notify a device hosting a group of applications when alternative registration points for that group of applications are available (e.g. via different underlying networks) based on the service requirements of each of the applications hosted. | Not<br>implemented                        |
| OSR-080<br>See REQ-2015-<br>574R01  | The oneM2M System shall provide the capability to register applications in group or independently, based on their service requirements.  | Not<br>implemented                        |
| OSR-081<br>See REQ-2015-<br>0553R02 | The oneM2M System shall be able to collect data that is broadcast (e.g. in industrial bus systems) according to data collection policies.  | Not<br>implemented                        |
| OSR-082<br>See REQ-2015-<br>0553R02 | The oneM2M System shall allow the update, modification, or deletion of data collection policies within an M2M Application.   | Not<br>implemented                        |
| OSR-083<br>See REQ-2015-<br>0593R02 | The oneM2M System shall be able to filter information from oneM2M Devices for a given set of parameters.   | Not<br>implemented                        |
| OSR-084<br>See REQ-2015-<br>0595R04 | The oneM2M System shall be able to handle an event notification from an authorized M2M Application which triggers actions to be performed on the M2M Device (example: Turn on or off the monitoring).  | Not<br>implemented                        |
| OSR-085<br>See REQ-2015-<br>0608    | The oneM2M System shall support resource caching of registered M2M Devices. Resource caching is a mechanism through which the oneM2M System retains resources of a registered M2M Device in temporarily inactive state by moving the resources to a temporary storage e.g. cache bin.              | Not<br>implemented                        |
| OSR-086<br>See REQ-2015-<br>0611R02 | The oneM2M System shall enable M2M Gateways to discover M2M Infrastructure Nodes and M2M Devices available for data exchange.  | Implemented<br>in Rel-1                   |
| OSR-087<br>See REQ-2015-<br>0611R02 | The oneM2M System shall enable M2M Infrastructure Nodes and M2M Device to discover M2M Gateways available for data exchange.   | Implemented<br>in Rel-1                   |
| OSR-088<br>See REQ-2015-<br>0611R02 | The oneM2M System shall be able to support the capabilities for data repository (i.e. to collect/store) and for data transfer among authorized M2M Devices and M2M Gateways via M2M Area Networks by only involving the field domain.  | Implemented<br>in Rel-1                   |
| OSR-089<br>See REQ-2015-<br>0620    | The oneM2M System shall enable the cancellation of continuous data collection and/or the deletion of collected data when pre-defined conditions are met.   | Not<br>implemented                        |
| OSR-090<br>See REQ-2015-<br>0622R02 | The oneM2M System shall be able to forward the M2M Application Data to M2M Application without storing the Data.   | Partially<br>implemented<br>(see note 22) |
| OSR-091<br>See REQ-2015-<br>0622R02 | The oneM2M System shall be able to notify interested oneM2M entities when it detects forwarded M2M Application Data was not delivered within expected time duration.   | Not<br>implemented                        |
| OSR-092<br>See REQ-2015-<br>0629    | The oneM2M System shall provide the capability for monitoring and describing data streams with associated attributes e.g. data freshness, accuracy, sampling rate, data integrity.   | Not<br>implemented                        |
| OSR-093<br>See REQ-2015-<br>0630    | The oneM2M System shall support transaction management to multiple devices<br>or applications providing policy based mechanism that should be invoked<br>(e.g. keep status, re-schedule, rollback) depending on the outcome of the<br>desired operation.   | Not<br>implemented                        |
| OSR-094<br>See REQ-2015-<br>0631R02 | The oneM2M System shall provide Information Model(s) to support interoperability among different devices/applications.   | Implemented<br>in Rel-2                   |
| OSR-095<br>See REQ-2015-<br>0631R02 | The oneM2M System should provide mappings between different Information Models from non-oneM2M System(s).  | Not<br>implemented                        |
| OSR-096<br>See REQ-2015-<br>0631R02 | The oneM2M System should be able to interwork with non-oneM2M System(s).   | Implemented<br>in Rel-2                   |

| Requirement ID  | Description  | Release                  |
|---|--|--------------------------|
| OSR-097<br>See REQ-2015-<br>0583R01                     | The oneM2M System shall be able to share data collection policies among multiple M2M Devices/Gateways within an M2M Application Service, or among different M2M Application Services.  | Not<br>implemented       |
| OSR-098<br>See REQ-2016-<br>0055R02                     | The oneM2M system shall be able to support machine socialization functionalities (such as existence discovery, correlated task discovery, message interface discovery and process optimization for multiple machines with same tasks).   | Not<br>implemented       |
| OSR-099<br>See REQ-2016-<br>0066R01                     | The oneM2M system shall enable continuity of services to M2M devices as they move across various geographic points in the oneM2M System(s).  | Implemented<br>in Rel-3  |
| OSR-100<br>See REQ-2017-<br>0006R02                     | The oneM2M system shall allow use of multiple communication methods (protocol bindings, serializations, and versions) between M2M Devices/Gateways and M2M application services.   |                          |
| OSR-101<br>See TS-0002-<br>Requirements-<br>V3_1_1.docx | The oneM2M System shall enable discovery of M2M Application Servers, M2M Management Servers and M2M Devices available to an M2M Gateway for data exchange.   |                          |
| OSR -102<br>See REQ-2017-<br>0008R02                    | The oneM2M System shall enable discovery of M2M Gateways available to a M2M Management Server and an M2M Device for data exchange.   |                          |
| OSR-103<br>See REQ-2017-<br>0008R02                     | The oneM2M System shall be able to support the capabilities for data repository (i.e. to collect/store) and for data transfer from one or more M2M Devices or M2M Gateways, for delivery to one or more M2M Gateways via M2M Area Network without any assistance or instruction of M2M Management Servers and M2M Application Serve. |                          |
| OSR-104<br>See REQ-2017-<br>0008R02                     | Upon request from M2M Application Server, an M2M Gateway shall enable functions that pre-process (e.g. average) M2M data before providing them to the recipient.   | Not<br>Implemented       |
| OSR -105<br>See REQ-2017-<br>0008R02                    | Upon request, an M2M Gateway shall enable functions that erase M2M data (e.g. that have been sent or could not be sent to the recipient within a certain time) based on criteria from an M2M Application Server.   | Not<br>Implemented       |
| OSR-106<br>See REQ-2017-<br>0008R02                     | An M2M Gateway and/or an M2M Device shall be able to broadcast the need to receive/deliver specific data.to otherM2M Devices and/or M2M Gateways.  | Not<br>Implemented       |
| OSR -107<br>See REQ-2017-<br>0008R02                    | The oneM2M system shall enable M2M Gateways and/or M2M Devices to establish a connection to each other if able to receive/deliver the specific data.   | Not<br>Implemented       |
| OSR-108<br>See REQ-2017-<br>0008R02                     | The oneM2M System shall enable M2M Gateways to set conditions used for processing jointly group/aggregate data subscriptions to reduce the number of messages to M2M Devices and distribute the resulting notifications according to the set conditions.   | Implemented<br>in Rel-3  |
| OSR -109<br>See REQ-2017-<br>0008R02                    | The oneM2M System shall enable M2M Gateways to distribute notifications according to how data subscriptions have been grouped/aggregated.  | Implemented<br>in Rel-3  |
| OSR-110<br>See REQ-2017-<br>0008R02                     | The oneM2M System shall enable subscriptions to changes to multiple data sources (e.g. oneM2M resources) which aim to generate data publication (i.e. automatic notifications) if and only if the expected changes to each of those multiple resources occur concurrently.   | Implemented<br>in Rel-3  |
| OSR-111<br>See REQ-2017-<br>0018R01                     | The oneM2M system shall be able to support heterogeneous identification services, the recognition of external identification systems and converting an object identifier to a compatible identifier recognized by the oneM2M system.   |                          |
| OSR-112<br>See REQ-2017-<br>0030R05                     | The oneM2M System shall enable the M2M Application to configure the notification interval in the M2M Devices.  | Implemented<br>in Rel-1  |
| OSR-113<br>See REQ-2017-<br>0030R05                     | The oneM2M System shall support communication between the Infrastructure Domain and M2M devices either directly or via a gateway.  | Implemented<br>in Rel-1  |
| OSR-114<br>See REQ-2017-<br>0030R05                     | The oneM2M System shall enable exchange of information between M2M applications via the Infrastructure Domain.   | Implemented<br>in Rel-1  |
| OSR-115<br>See REQ-2017-<br>0030R05                     | The oneM2M system shall be able to support service requests from M2M applications for communication with QoS requirement e.g. higher delivery priority, reliable delivery.   | Partially<br>Implemented |
| OSR-116<br>See REQ-2017-<br>0030R05                     | The oneM2M system shall be able to support requests with time expiration or geography restriction.   | Implemented<br>in Rel-2  |

| Requirement ID     | Description   | Release              |
|--------------------|---|----------------------|
| OSR-117            | The oneM2M System shall support setting the configuration for Geo-Fence           | Implemented          |
| See REQ-2017-      | based location services by a M2M Application.                                     | in Rel-2             |
| 0030R05            |   |                      |
| OSR-118            | The oneM2M System shall enable exchanges of diagnostic data periodically          | Rel-3/ future        |
| See REQ-2017-      | between M2M Devices and the Infrastructure Domain.                                | releases             |
| 0031R05            |   |                      |
| OSR-119            | The oneM2M system shall support a mechanism to describe the syntax and            | Rel-3/ future        |
| See REQ-2017-      | semantics format of the diagnostics data exchanged between the M2M Devices        | releases?            |
| 0031R05            | and the InfrastructureDomain.   | 101003031            |
| OSR-120            | The oneM2M System shall be able to provide the service capability for location    | Implemented          |
| See REQ-2017-      | based services.   | implemented          |
|                    | Dased Services.   |                      |
| 0031R05<br>OSR-121 | The anaMOM System shall be able to provide the convice conshility supporting      |                      |
|                    | The oneM2M System shall be able to provide the service capability supporting      | luo mile un e mite d |
| See REQ-2017-      | Over The Air management.  | Implemented          |
| 0031R05            |   | D. Lović i           |
| OSR-122            | The oneM2M system shall provide the capability for an M2M Device to maintain      | Rel-3/ future        |
| See REQ-2017-      | registration with multiple entities simultaneously.                               | releases?            |
| 0031R05            |   |                      |
| OSR-123            | The oneM2M System shall enable exchange of information with the intended          |                      |
| See REQ-2017-      | vehicles by unicast, multicast and/or broadcast.                                  | Partially            |
| 0031R05            |   | Implemented          |
|                    |   | (Note 23)            |
| OSR-124            | The oneM2M System shall be able to transfer time critical information. For        | Rel-3/ future        |
| See REQ-2017-      | example for feeding back current road states to automatic driving control, the    | releases?            |
| 0031R05            | feedback time should be less than a few seconds (the distance between             |                      |
|                    | vehicles normally corresponds to a few seconds) to avoid unnecessary speed        |                      |
|                    | down/stop of following vehicles (see note 24).                                    |                      |
| OSR-125            | The oneM2M System shall be able to guarantee its reliability in order to          | Rel-3/ future        |
| See REQ-2017-      | receive/feedback messages from/to related M2M Devices (e.g. for Vehicular         | releases?            |
| 0031R05            | Domain) (see note 24)   |                      |
| OSR-126            | The oneM2M System shall enable sharing of service information between             | Rel-3/ future        |
| See REQ-2017-      | devices/GWs based on proximity (see note 24).                                     | releases?            |
| 0031R05            |   |                      |
| OSR-127            | The oneM2M System shall enable sending and receiving of service information       | Rel-3/ future        |
| See REQ-2017-      | between devices/GWs with minimized interruption (see note 24).                    | releases?            |
| 0031R05            |   | 10100303             |
| OSR-128            | The oneM2M System shall support mobile/portable M2M Gateway and/or                | Rel-3/ future        |
| See REQ-2017-      | Device.   | releases?            |
| 0031R05            | Device.   | Teleases             |
| OSR-129            | The oneM2M System shall support triggering M2M Devices for on-demand              | Rel-3/ future        |
| See REQ-2017-      | reporting regarding collected data.   | releases?            |
| 0031R05            | reporting regarding collected data.   | Teleases             |
|                    | The eneMOM Queters shall enable the MOM Infractivisticity to facilitate direct    | Rel-3/ future        |
| OSR-130            | The oneM2M System shall enable the M2M Infrastructure to facilitate direct        |                      |
| See REQ-2017-      | communication between two or more different M2M devices without having            | releases?            |
| 0031R05            | registered with one another.  |                      |
| OSR-131            | The oneM2M System shall be able to verify geographical location information       | Rel-3/ future        |
| See REQ-2017-      | from moving objects regardless of information accuracy.                           | releases?            |
| 0031R05            |   |                      |
| OSR-132            | The oneM2M System shall be able to verify time synchronization.                   | Rel-3/ future        |
| See REQ-2017-      |   | releases?            |
| 0031R05            |   |                      |
| OSR-133            | The oneM2M System shall be able to coordinate end-to-end reliable                 | Rel-3/ future        |
| See REQ-2017-      | communications for applications that can have safety impacts.                     | releases?            |
| 0031R05            |   |                      |
| OSR-134            | The oneM2M System shall enable provisioning, installation, configuration and      | future               |
| See REQ-2017-      | registration methods of field devices for different management systems (e.g.      | releases?            |
| 0048R02            | allowing different entities to own and manage the device) or application          |                      |
|                    | systems (e.g. allowing different entities to utilise the device data).            |                      |
| OSR-135            | The oneM2M System shall enable registrations to include information               | future               |
| See REQ-2017-      | identifying the peer entities, and related information (e.g. management           | releases?            |
| 0048R02            | privilege, subscription etc.), necessary for establishment of the respective peer |                      |
|                    | relationships.  |                      |
| OSR-136            | The oneM2M System shall enable registrations using a complete set of              | future               |
|                    | information context for the peer entities (termed "full registrations").          | releases?            |
| See REQ-2017-      |   | Teleases:            |

| Requirement ID   | Description   | Release          |
|--|---|------------------|
| OSR-137  | The oneM2M System shall enable registrations using only a subset of   | future           |
| See REQ-2017-<br>0048R02                               | information context for the peer entities (termed "lightweight registration").  | releases?        |
| OSR-138  | The oneM2M System shall enable "lightweight registrations" instances with   | future           |
| See REQ-2017-  | different entities, which pertain to a common peer entity, to use different sets of   | releases?        |
| 0048R02  | information about the common peer entity as needed.   |                  |
| OSR-139  | The oneM2M System shall enable correlation of the "full registration" and the   | future           |
| See REQ-2017-<br>0048R02                               | "lightweight registration" instances pertaining to a common peer entity.  | releases?        |
| OSR-140  | The oneM2M System shall enable differentiation of the "full registrations" and  | future           |
| See REQ-2017-  | the "lightweight registrations" instances pertaining to a common peer entity.   | releases?        |
| 0048R02  |   |                  |
| available<br>NOTE 2: The relat                         | ion M2M Network Application to M2M Device/Gateway may be 1:1, 1:n, n:1 and/o  |                  |
|  | ing on M2M Service level is assumed by this requirement.  |                  |
| NOTE 5: Transpar                                       | vice Subscriptions are not Application subscriptions (e.g. Home Energy Managem<br>ent exchange of information implies information that is mainly interpreted by the M   |                  |
|  | on and the Underlying Network Provider.   |                  |
|  | n the Event Categories and via interworking with Underlying Networks, the oneM2l<br>differentiated services (by providing Quality-of-Service) requested by M2M Applica  |                  |
| NOTE 7: Geograp  | hical location information can be more than simply longitude, latitude and Geo-fen  | ce event.        |
| NOTE 8: "means"  | above does not imply only technical mechanisms, e.g. there is no protocol version   | negotiation.     |
|  | only GBA and localization are available.  |                  |
|  | vers: Location, Charging and billing services, Configuration and management of de<br>on and profiles, Triggering.   | evices, Device   |
|  | uirement applies to M2M Devices but not to devices interworked via M2M Area Net   | tworks           |
| NOTE 12: Based or                                      |   | works.           |
|  | ort for streamed communication.   |                  |
|  | ns to trigger (via Tsp interface) devices in a roamed-to network.   |                  |
|  | ntax to describe Dynamic Context is not specified.  |                  |
|  | ible to deliver CoAP over SMS, but currently SMS message delivery interfaces are  | e not explicitly |
| NOTE 17: For exam<br>service p<br>reporting<br>the M2M | nple, if the battery of Gateway is remained only 10% or below, the Gateway notifie<br>latform of the status. The M2M Application in the Infrastructure node will adjust the<br>and notification based on the Event Categories associated with each message. C<br>Gateway operates longer. | e scheduling of  |
| NOTE 18: Void.   |   |                  |
| NOTE 19: Only the<br>implement                         | M2M Service Administrative State can be notified. M2M Service Operational Statunted.  | is is not        |
| NOTE 20: This can                                      | be implemented based on preconfigured access rights.  |                  |
| NOTE 21: In Rel-1 t                                    | this is supported by means of the Mca interfaces, mapping the new service module<br>data are stored in the CSE but never get retrieved by other entities except by subs   |                  |
|  | communications have been implemented in Release 1.  |                  |
|  |   |                  |

# 6.2 Management Requirements

| Requirement ID | Description   | Release                 |
|----------------|---|-------------------------|
| MGR-001        | The oneM2M System shall be able to support management and configuration of                              | Implemented             |
|                | M2M Gateways/ Devices including resource constrained M2M Devices.                                       | in Rel-1                |
| MGR-002        | The oneM2M System shall provide the capability to discover the M2M Area                                 | Implemented             |
|                | Networks including information about devices on those networks and the                                  | in Rel-1                |
|                | parameters (e.g. topology, protocol) of those networks.   |                         |
| MGR-003        | The oneM2M System shall be able to provide the capability to maintain and                               | Implemented             |
|                | describe the management Information Model of devices and parameters                                     | in Rel-1                |
|                | (e.g. topology, protocol) of M2M Area Networks.   |                         |
| MGR-004        | The oneM2M System shall support common means to manage devices  | Implemented             |
|                | enabled by different management technologies (e.g. OMA DM, BBF TR069).                                  | in Rel-1                |
| MGR-005        | The oneM2M System shall provide the capability to manage multiple devices in                            | Implemented             |
|                | a grouped manner.   | in Rel-1                |
| MGR-006        | The oneM2M System shall provide the capability for provisioning and                                     | Implemented             |
|                | configuration of devices in M2M Area Networks.  | in Rel-1                |
| MGR-007        | The oneM2M System shall provide the capability for monitoring and diagnostics                           | Implemented             |
|                | of M2M Gateways/Devices in M2M Area Networks.   | in Rel-1                |
| MGR-008        | The oneM2M System shall provide the capability for software management of devices in M2M Area Networks. | Implemented<br>in Rel-1 |
| MGR-009        | The oneM2M System shall provide the capability for rebooting and/or resetting                           | Implemented             |
| MOR 000        | of M2M Gateways/Devices and other devices in M2M Area Networks.   | in Rel-1                |
| MGR-010        | The oneM2M System shall provide the capability for authorizing devices to                               | Implemented             |
| Mert or o      | access M2M Area Networks.   | in Rel-1                |
| MGR-011        | The oneM2M System shall provide the capability for modifying the topology of                            | Implemented             |
|                | devices in M2M Area Networks, subject to restriction based on M2M Area                                  | in Rel-1                |
|                | Network policies.   |                         |
| MGR-012        | Upon detection of a new device the M2M Gateway shall be able to be                                      | Partially               |
|                | provisioned by the M2M Service Infrastructure with an appropriate configuration                         | implemented             |
|                | which is required to handle the detected device.  | (see note)              |
| MGR-013        | Void.   |                         |
| MGR-014        | The oneM2M System shall be able to retrieve events and information logged by                            | Implemented             |
|                | M2M Gateways/ Devices and other devices in M2M Area Networks.   | in Rel-1                |
| MGR-015        | The oneM2M System shall be able to support firmware management  | Implemented             |
|                | (e.g. update) of M2M Gateways/ Devices and other devices in M2M Area                                    | in Rel-1                |
|                | Networks.   |                         |
| MGR-016        | The oneM2M System shall be able to retrieve information related to the Static                           | Implemented             |
|                | and Dynamic Device/Gateway Context for M2M Gateways/Devices as well as                                  | in Rel-1                |
|                | Device Context for other devices in M2M Area Networks.  |                         |
| MGR-017        | The oneM2M System shall be capable of correlating Access Management                                     | Implemented             |
|                | elements provided by the technology specific Device Management Protocols to                             | in Rel-1                |
|                | Access Management elements used by the oneM2M System.   |                         |
| MGR-018        | The M2M Service Infrastructure shall be able to accept standardized                                     | Not                     |
| See REQ-2015-  | configuration settings from an external configuration server to allow the M2M                           | implemented             |
| 0555R02        | Devices to register.  |                         |
| MGR-019        | The M2M Device shall be able to accept standardized configuration settings                              | Not                     |
| See REQ-2015-  | from an external configuration server in order to register to the oneM2M                                | implemented             |
| 0555R02        | System.   |                         |
| NOTE: In Rel-1 | no detection mechanism exists, but once an M2M Device is known at the Gatewa                            | y it can be             |
| configur       | ed via the GW through DM.   |                         |

#### **Table 2: Management Requirements**

### 6.3 Semantics Requirements

### 6.3.1 Ontology Related Requirements

#### **Table 3: Ontology Requirements**

| Requirement ID | Description   | Release     |
|----------------|---|-------------|
| ONT-001        | The M2M System shall support a standardized format for the rules/policies                                       | Not         |
| See REQ-2015-  | used to define service logic.   | implemented |
| 0521R01        |   |             |
| ONT-002        | The M2M System shall support modelling semantic descriptions of Things  | Implemented |
| See REQ-2015-  | (including relationships among them) by using ontologies.   | in Rel-2    |
| 0521R01        | (   |             |
| ONT-003        | The M2M System shall support a common modelling language for ontologies   | Implemented |
| See REQ-2015-  | (e.g. OWL).   | in Rel-2    |
| 0521R01        | (0.g. 0112).  |             |
| ONT-004        | The M2M System should be able to provide translation capabilities from  | Not         |
| See REQ-2015-  | different modelling languages for ontologies to the language adopted by   | implemented |
| 0521R01        | oneM2M if the expressiveness of the imported ontology allows.   | implemented |
| ONT-005        | The M2M System shall provide the capability to retrieve semantic descriptions                                   | Not         |
| See REQ-2015-  |   |             |
|                | and ontologies stored outside of the M2M System.  | implemented |
| 0521R01        | The MOM Queters shall provide support for linking entalspice defined in the                                     | Net         |
| ONT-006        | The M2M System shall provide support for linking ontologies defined in the                                      | Not         |
| See REQ-2015-  | context of the M2M System with ontologies defined outside this context.   | implemented |
| 0521R01        |   |             |
| ONT-007        | The M2M System shall be able to support extending ontologies in the M2M   | Not         |
| See REQ-2015-  | System.   | implemented |
| 0521R01        |   |             |
| ONT-008        | The M2M System shall be able to use ontologies that contain concepts  | Implemented |
| See REQ-2015-  | representing aspects (e.g. a room) that are not represented by resources of                                     | in Rel-2    |
| 0521R01        | the M2M System.   |             |
| ONT-009        | The M2M System shall be able to re-use common ontologies (e.g. location,  | Not         |
| See REQ-2015-  | time ontologies, etc.) which are commonly used in M2M Applications.   | implemented |
| 0521R01        |   |             |
| ONT-010        | The M2M System shall be able to support simultaneous usage of multiple  | Implemented |
| See REQ-2015-  | ontologies for the same M2M resource.   | in Rel-2    |
| 0521R01        |   |             |
| ONT-011        | The M2M System shall provide the capability for making ontology available in                                    | Not         |
| See REQ-2015-  | the M2M System, e.g. through announcement.  | implemented |
| 0521R01        |   |             |
| ONT-012        | The M2M System shall be able to support mechanisms to import external   | Not         |
| See REQ-2015-  | ontologies into the M2M System.   | implemented |
| 0521R01        |   |             |
| ONT-013        | The M2M System shall be able to support update of ontologies.   | Not         |
| See REQ-2015-  |   | implemented |
| 0521R01        |   | 1           |
| ONT-014        | The M2M System shall enable functions for data conversion based on  | Not         |
| See REQ-2015-  | ontologies.   | implemented |
| 0521R01        |   |             |
| ONT-015        | The M2M System shall be able to model devices based on ontologies which   | Implemented |
| See REQ-2015-  | may be available outside the M2M System (e.g. HGI device template).   | in Rel-2    |
| 0521R01        |   | 11110-2     |
| ONT-016        | The M2M System shall support storage, management and discovery of   | Not         |
| See REQ-2015-  | ontologies.   | implemented |
|                | เป็นเป็นหารู้เกิด เป็นเป็น เป็ | implemented |
| 0521R01        | The energy of the property of the relation (the Drived T-the  | Net         |
| ONT-017        | The oneM2M System shall support a semantic relation ("Is Paired To")  | Not         |
| See REQ-2015-  | between two M2M Devices.  | implemented |
| 0609           |   |             |

### 6.3.2 Semantics Annotation Requirements

| Requirement ID | Description   | Release        |
|----------------|---|----------------|
| ANN-001        | The oneM2M System shall provide capabilities to manage semantic information | Implemented in |
| See REQ-2015-  | about the oneM2M resources, e.g. create, retrieve, update, delete,          | Rel-2          |
| 0521R01        | associate/link.   |                |
| ANN-002        | The oneM2M System shall support a common language for semantic              | Implemented in |
| See REQ-2015-  | description, e.g. RDF.  | Rel-2          |
| 0521R01        |   |                |
| ANN-003        | The oneM2M System shall support semantic annotation of oneM2M resources     | Implemented in |
| See REQ-2015-  | for example application related data contained in containers.               | Rel-2          |
| 0521R01        |   |                |
| ANN-004        | The oneM2M System shall support semantic annotation based on related        | Implemented in |
| See REQ-2015-  | ontologies.   | Rel-2          |
| 0521R01        |   |                |
| ANN-005        | The oneM2M System shall provide the capability for making semantic          | Implemented in |
| See REQ-2015-  | descriptions available in the M2M System, e.g. announcement.                | Rel-2          |
| 0521R01        |   |                |
| ANN-006        | The oneM2M System shall enable applications to retrieve an ontology         | Not            |
| See REQ-2015-  | representation related to semantic information used in the M2M System.      | implemented    |
| 0521R01        |   |                |
| ANN-007        | The oneM2M system shall provide capabilities to manage data quality         | Not            |
| See REQ-2015-  | descriptions of resource.   | implemented    |
| 0521R01        |   |                |

#### **Table 4: Semantics Annotation Requirements**

### 6.3.3 Semantics Query Requirements

#### Table 5: Semantics Query Requirements

| Requirement ID | Description  | Release     |
|----------------|--|-------------|
| QRY-001        | The oneM2M System shall provide capabilities to discover M2M Resources | Implemented |
| See REQ-2015-  | based on semantic descriptions.  | in Rel-2    |
| 0521R01        |  |             |

### 6.3.4 Semantics Mashup Requirements

| Requirement ID | Description   | Release     |
|----------------|---|-------------|
| MSH-001        | The oneM2M System shall provide the capability to host processing functions | Not         |
| See REQ-2015-  | for mash-up.  | implemented |
| 0521R01        |   |             |
| MSH-002        | The oneM2M System shall enable M2M Applications to provide processing       | Not         |
| See REQ-2015-  | functions for mash-up.  | implemented |
| 0521R01        |   |             |
| MSH-003        | The oneM2M System itself may provide pre-provisioned or dynamically created | Not         |
| See REQ-2015-  | processing functions for mash-up.   | implemented |
| 0521R01        |   |             |
| MSH-004        | The oneM2M System shall be able to create and execute mash-ups based on     | Not         |
| See REQ-2015-  | processing functions.   | implemented |
| 0521R01        |   |             |
| MSH-005        | The oneM2M System shall be able to expose mash-ups as resources e.g.        | Not         |
| See REQ-2015-  | virtual devices.  | implemented |
| 0521R01        |   |             |

### 6.3.5 Semantics Reasoning Requirements

| Requirement ID | Description   | Release     |
|----------------|---|-------------|
| RES-001        | The oneM2M System shall be able to update ontologies as a result of the     | Not         |
| See REQ-2015-  | ontology reasoning.   | implemented |
| 0521R01        |   | -           |
| RES-002        | The oneM2M System shall be able to support semantic reasoning e.g. ontology | Not         |
| See REQ-2015-  | reasoning or semantic rule-based reasoning.                                 | implemented |
| 0521R01        |   |             |
| RES-003        | The oneM2M System shall be able to support adding and updating semantic     | Not         |
| See REQ-2015-  | information based on semantic reasoning.                                    | implemented |
| 0521R01        |   |             |

#### Table 7: Semantics Reasoning Requirements

### 6.3.6 Data Analytics Requirements

#### **Table 8: Data Analytics Requirements**

| Requirement ID | Description   | Release     |
|----------------|---|-------------|
| ANA-001        | The oneM2M System shall be able to support capabilities (e.g. processing            | Not         |
| See REQ-2015-  | function) for performing M2M data analytics based on semantic descriptions          | implemented |
| 0521R01        | from M2M Applications and /or from the M2M System.                                  | -           |
| ANA-002        | The oneM2M System shall provide the capability of interpreting and applying         | Not         |
| See REQ-2015-  | service logic (e.g. rules/policies of triggering operations upon other resources or | implemented |
| 0521R01        | attributes according to the change of the monitored resource) described with        |             |
|                | semantic annotation and ontology.   |             |
| ANA-003        | The oneM2M System shall support a standardized format for the rules/policies        | Not         |
| See REQ-2015-  | used to define service logic.   | implemented |
| 0521R01        |   | -           |

## 6.4 Security Requirements

#### **Table 9: Security Requirements**

| Requirement ID | Description  | Release                             |
|----------------|--|-------------------------------------|
| SER-001        | The oneM2M System shall incorporate protection against threats to its availability such as Denial of Service attacks.  | Partially<br>Implemented            |
| SER-002        | The oneM2M System shall be able to ensure the Confidentiality of data.   | in Rel-1<br>Implemented<br>in Rel-1 |
| SER-003        | The oneM2M System shall be able to ensure the Integrity of data.   | Implemented<br>in Rel-1             |
| SER-004        | In case where the M2M Devices support USIM/UICC and the Underlying<br>Networks support network layer security, the oneM2M System shall be able to<br>leverage device's USIM/UICC credentials and network's security capability e.g.<br>3GPP GBA for establishing the M2M Services and M2M Applications level<br>security through interfaces to Underlying Network. | Implemented<br>in Rel-1             |
| SER-005        | In case where the M2M Devices support USIM/UICC and the Underlying<br>Networks support network layer security, and when the oneM2M System is<br>aware of Underlying Network's bootstrapping capability e.g. 3GPP GBA, the<br>oneM2M System shall be able to expose this capability to M2M Services and<br>M2M Applications through API.                            | Implemented<br>in Rel-1             |
| SER-006        | In case where the M2M Devices support USIM/UICC and the Underlying<br>Networks support network layer security, the oneM2M System shall be able to<br>leverage device's USIM/UICC Credentials when available to bootstrap M2M<br>Security Association.  | Implemented<br>in Rel-1             |
| SER-007        | When some of the components of an M2M Solution are not available (e.g. WAN connection lost), the oneM2M System shall be able to support the Confidentiality and the Integrity of data between authorized components of the M2M Solution that are available.  | Implemented<br>in Rel-1             |

| Requirement ID                      | Description   | Release  |
|-------------------------------------|---|--|
| SER-008                             | The oneM2M System shall support countermeasures against unauthorized  | Implemented  |
|                                     | access to M2M Services and M2M Application Services.  | in Rel-1   |
| SER-009                             | The oneM2M System shall be able to support Mutual Authentication for interaction with Underlying Networks, M2M Services and M2M Application Services.   | Implemented<br>in Rel-1                              |
| SER-010                             | The oneM2M System shall be able to support mechanisms for protection against misuse, cloning, substitution or theft of security credentials.  | Implemented<br>in Rel-1                              |
| SER-011                             | The oneM2M System shall protect the use of the identity of an M2M Stakeholder within the oneM2M System against discovery and misuse by other stakeholders.  | Implemented<br>in Rel-1                              |
| SER-012                             | The oneM2M System shall be able to support countermeasures against<br>Impersonation attacks and replay attacks.   | Partially<br>implemented<br>in Rel-1<br>(see note 3) |
| SER-013                             | The oneM2M System shall be able to provide the mechanism for integrity-<br>checking on boot, periodically on run-time, and on software upgrades for<br>software/hardware/firmware component(s) on M2M Device(s).  | Not<br>implemented                                   |
| SER-014                             | The oneM2M System shall be able to provide configuration data to an authenticated and authorized M2M Application in the M2M Gateway/Device.   | Implemented<br>in Rel-1                              |
| SER-015                             | The oneM2M System shall be able to support mechanisms to provide M2M Service Subscriber identity to authorized and authenticated M2M Applications when the oneM2M System has the M2M Service Subscriber's consent.  | Partially<br>implemented<br>(see note 4)             |
| SER-016                             | The oneM2M System shall be able to support non repudiation within the M2M service layer and in its authorized interactions with the network and application layers.   | Implemented<br>in Rel-1                              |
| SER-017                             | The oneM2M System shall be able to mitigate threats identified in oneM2M TR-0008 [i.3].   | Implemented<br>in Rel-1                              |
| SER-018                             | The oneM2M System shall enable an M2M Stakeholder to use a resource or service and be accountable for that use without exposing its identity to other stakeholders.   | Partially implemented                                |
| SER-019                             | The oneM2M System shall be able to use service-level Credentials present inside the M2M Device for establishing the M2M Services and M2M Applications level security.   | Implemented<br>in Rel-1                              |
| SER-020                             | The oneM2M System shall enable legitimate M2M Service Providers to provision their own Credentials into the M2M Devices/Gateways.   | Implemented<br>in Rel-1<br>(see note 5)              |
| SER-021                             | The oneM2M System shall be able to remotely and securely provision M2M security Credentials in M2M Devices and/or M2M Gateways.   | Implemented<br>in Rel-1<br>(see note 5)              |
| SER-022                             | The oneM2M System shall enable M2M Application Service Providers to authorize interactions involving their M2M Applications on supporting entities (e.g. Devices/ Gateways/ Service infrastructure).  | Implemented<br>in Rel-1                              |
| SER-023                             | Where a Hardware Security Module (HSM) is supported, the oneM2M System shall be able to rely on the HSM to provide local security.  | Partially<br>implemented                             |
| SER-024                             | The oneM2M System shall enable M2M Applications to use different and segregated security environments.  | Partially<br>implemented                             |
| SER-025                             | The oneM2M System shall be able to prevent unauthorized M2M Stakeholders from identifying and/or observing the actions of other M2M Stakeholders in the oneM2M System, e.g. access to resources and services (see note 1).  | Implemented<br>in Rel-1                              |
| SER-026                             | The oneM2M System shall be able to provide mechanism for the protection of Confidentiality of the geographical location information (see note 2).   | Implemented<br>in Rel-1                              |
| SER-027                             | The M2M System shall support grouping of M2M Applications that have the   | Implemented  |
| See REQ-2015-<br>0558R01            | same access control rights towards one specific resources, together so that access control validation can be performed by validating if the M2M Application is a member of certain group.   | in Rel-2   |
| SER-028<br>See REQ-2015-<br>0568R04 | The oneM2M System shall enable security protocol end-points to protect portions of individual application-generated data so that intermediate entities (whether trusted or untrusted) forwarding the data are unable to access the protected portions of the data in clear text.                                  | Implemented<br>in Rel-2                              |
| SER-029<br>See REQ-2015-<br>0568R04 | The oneM2M System shall enable security protocol end-points to protect<br>portions of individual application-generated data so that security protocol<br>end-points can detect modification, including modification by intermediate<br>service layer entities (whether trusted or untrusted) forwarding the data. | Implemented<br>in Rel-2                              |

|   | provider and software managed by an application provider. The entity managing a   |               |  |  |  |
|   | piece is designed as "allowed stakeholder" in the requirements above.   |               |  |  |  |
|   | for SIM is supported in Release 1 and Release 2.  |               |  |  |  |

# 6.5 Charging Requirements

#### **Table 10: Charging Requirements**

| Requirement ID | Description  |  |  |  |  |
|----------------|--|--|--|--|--|
| CHG-001        | The oneM2M System shall support collection of charging specific information related to the individual services facilitated by the oneM2M System (e.g. Data Management, Device Management and/or Connectivity Management). Collection of charging specific information shall be possible concurrent with the resource usage. The format of the recorded information shall be fully specified including mandatory and optional elements. | Implemented<br>in Rel-1<br>(see note 4)  |  |  |  |
| CHG-002        | The oneM2M System shall support mechanisms to facilitate correlation of charging information (e.g. of a User) collected for M2M Services, M2M Application Services and services provided by Underlying Network Operators.  | Partially<br>implemented<br>(see note 2) |  |  |  |
| CHG-003        | The oneM2M System shall provide means to coordinate charging data records for data usages with differentiated QoS from the Underlying Network.   | Not<br>implemented                       |  |  |  |
| CHG-004        | The oneM2M System shall be able to utilize existing charging mechanisms of Underlying Networks.  | Not<br>implemented<br>(see note 3)       |  |  |  |

| Requirement ID   | Description   | Description Release |  |  |  |
|--|---|---------------------|--|--|--|
| CHG-005  | The oneM2M System shall support transfer of the charging information records in Rel-1   |                     |  |  |  |
|  | <ul> <li>subscriber billing;</li> </ul>   |                     |  |  |  |
|  | <ul> <li>inter-provider billing;</li> </ul>   |                     |  |  |  |
|  | provider-to-subscriber accounting including additional functions like     statistics.   |                     |  |  |  |
| CHG-006  | The oneM2M System should support generation of charging events for the purpose of requesting resource usage Authorization from the real time credit implemented |                     |  |  |  |
|  | control system where the subscriber account is located. The information   |                     |  |  |  |
| contained in the charging events and the relevant chargeable events shall be   |   |                     |  |  |  |
| fully specified including mandatory and optional elements (see note 1).  |   |                     |  |  |  |
| CHG-007  | The oneM2M System shall support mechanisms to correlate charging Rel-3/ future  |                     |  |  |  |
| See REQ-2017-  |   |                     |  |  |  |
| 0031R05 Providers.   |   |                     |  |  |  |
| NOTE 1: A chargeable event is any activity, a provider may want to charge for that utilizes the resources and related M2M Services offered by such provider. A charging event is the set of charging information needed by the credit control system for resource authorization. |   |                     |  |  |  |
| NOTE 2: Information collected can be sent to the Underlying Networks which may use it for charging.  |   |                     |  |  |  |
|  | NOTE 3: The oneM2M service layer can pass info to Underlying Networks but cannot use Underlying Network   |                     |  |  |  |
| mechani  | sm. Charging can be done by Underlying Network. This is covered by CHG-002.   |                     |  |  |  |
| NOTE 4: Only sup   |   |                     |  |  |  |

## 6.6 Operational Requirements

#### **Table 11: Operational Requirements**

| Requirement ID | Description  | Release     |  |  |
|----------------|--|-------------|--|--|
| OPR-001        | The oneM2M System shall provide the capability for monitoring and diagnostics      | Implemented |  |  |
|                | of M2M Applications.   | in Rel-1    |  |  |
| OPR-002        | The oneM2M System shall provide the capability for software management of          | Implemented |  |  |
|                | M2M Applications.  |             |  |  |
| OPR-003        | The oneM2M System shall be able to configure the execution state an M2M            | Implemented |  |  |
|                | Application (start, stop, restart).  | in Rel-1    |  |  |
| OPR-004        | When suitable interfaces are provided by the Underlying Network, the oneM2M        | Not         |  |  |
|                | System shall have the ability to schedule traffic via the Underlying Network       | implemented |  |  |
|                | based on instructions received from the Underlying Network.                        |             |  |  |
| OPR-005        | The oneM2M System shall be able to exchange information with M2M                   | Implemented |  |  |
|                | Applications related to usage and traffic characteristics of M2M Devices or M2M    | in Rel-2    |  |  |
|                | Gateways by the M2M Application. This should include support for the 3GPP          |             |  |  |
|                | feature called: "Time controlled" (see note).                                      |             |  |  |
| OPR-006        | Depending on availability of suitable interfaces provided by the Underlying        | Implemented |  |  |
|                | Network the oneM2M System shall be able to provide information related to          | in Rel-2    |  |  |
|                | usage and traffic characteristics of M2M Devices or M2M Gateways to the            |             |  |  |
|                | Underlying Network.  |             |  |  |
| OPR-007        | The oneM2M System shall be able to support receipt of the status information       | Not         |  |  |
| See REQ-2015-  | of the Underlying Network if supported by the Underlying Network.                  | implemented |  |  |
| 0550R03        |  |             |  |  |
| OPR-008        | The oneM2M System shall be able to provide the M2M Applications with status        | Not         |  |  |
| See REQ-2015-  | information received from the Underlying Network.                                  | implemented |  |  |
| 0550R03        |  |             |  |  |
| OPR-009        | The format for registered App-IDs shall be able to support use by people and       | Implemented |  |  |
| See 0585R01-   | systems to readily determine whether the App-ID is registered and the              | in Rel-2    |  |  |
| App-ID         | Registration Authority which issued the App-ID, App Developer and App Name.        |             |  |  |
| Requirements   |  |             |  |  |
| OPR-010        | The oneM2M System Registration Authorities shall be able to collect and            | Implemented |  |  |
| See 0585R01-   | maintain supporting required information when assigning an App-ID.                 | in Rel-2    |  |  |
| App-ID         |  |             |  |  |
| Requirements   |  |             |  |  |
| NOTE: "Time co | ontrolled" is equivalent to the MTC Features specified in clause 7.2 of 3GPP TS 22 | .368 [1].   |  |  |

# 6.7 Communication Management Requirements

| Requirement ID                       |  |   |  |
|--------------------------------------|--|---|--|
| CMR-001                              | The oneM2M System shall provide to M2M Applications a communication service which provides buffering of messages to/from M2M Gateway/Device/<br>Infrastructure Domain.   | Implemented<br>in Rel-1                             |  |
| CMR-002                              | The oneM2M System shall be able to support forwarding buffered messages depending on communication policies and based on service preference associated with the buffered messages.   | Implemented<br>in Rel-1                             |  |
| CMR-003                              | <ul> <li>The oneM2M System shall enable an M2M Application to send a communication request with the following service preference:</li> <li>QoS parameters, including delay tolerance, for initiating the delivery of data;</li> <li>categorizing communication requests into different levels of priority or QoS classes.</li> </ul>   | Implemented<br>in Rel-1                             |  |
| CMR-004                              | The oneM2M System shall be able to support concurrent processing of messages within M2M Gateways and/or M2M Devices from different sources with awareness for the service preference associated with the messages while observing the provisioned communication policies.  | Implemented<br>in Rel-1                             |  |
| CMR-005                              |  |   |  |
| CMR-006<br>See REQ-2015-<br>0564R02  | The oneM2M System shall support the ability for applications to categorize requested communications (priority, importance, etc.), so that the oneM2M System can adapt its actual communications (scheduling, aggregation, compression, etc.) by taking this categorization into account.   | (see note 1)<br>Implemented<br>in Rel-1             |  |
| CMR-007<br>See REQ-2015-<br>0564R02  | The oneM2M System shall support configurable communication policies that will define its communication patterns. Such policies shall take into account information received from the Underlying Network (such as information referred to in OPR-004) as well as information received from the Applications (such as the information referred to in OPR-005 or categorization of communications requested by the applications). | account<br>tion referred<br>s (such as<br>nications |  |
| CMR-008<br>See REQ-2015-<br>0564R02  | The oneM2M System shall support data aggregation based on communication policies when exchanging data between the M2M Gateway/Device/Infrastructure Domain.  | Implemented<br>in Rel-1                             |  |
| CMR-009<br>See REQ-2015-<br>0564R02  | The oneM2M System should support data compression based on communication policies when exchanging data between the M2M Gateway/Device/Infrastructure Domain.   | Not<br>Implemented                                  |  |
| CMR-010<br>See REQ-2015-<br>0564R02  | The oneM2M System shall support an additional randomized delay of communications, based on communication policies, when exchanging data between the M2M Gateway/Device/Infrastructure Domain.  | Implemented<br>in Rel-2                             |  |
| CMR-011<br>See REQ-2015-<br>0564R02  | The oneM2M System shall be able to monitor its own usage of the Underlying Networks over given periods of time: attempted communications, failed attempts and successful attempts.   | Implemented<br>in Rel-2                             |  |
| CMR-012<br>See REQ-2015-<br>0564R02  | The oneM2M System shall be able to restrict its own usage of the Underlying Networks, based on communication policies and on its monitored usage of them, when exchanging data between the M2M Gateway/Device/Infrastructure Domain.   | of in Rel-2<br>ructure                              |  |
| CMR-013<br>See REQ-2015-<br>0564R02  | - Underlying Networks, based on a time-based back-off procedure configurable in communication policies, when exchanging data between the M2M Gateway/Device/Infrastructure Domain.   |   |  |
| CMR-014<br>See REQ-2015-<br>0564R02  | The oneM2M System shall be able to restrict its own usage of the Underlying Networks, based on communication policies and on the date and time, when exchanging data between the M2M Gateway/Device/Infrastructure Domain.   | Implemented<br>in Rel-1                             |  |
| CMR-015<br>See REQ-2015-<br>0601R01  | The oneM2M System shall be able to identify a series of data (e.g. Time Series Data) and indicate individual data belonging to this series.  | Implemented<br>in Rel-2                             |  |
| CMR-0016<br>See REQ-2017-<br>0001R03 | The oneM2M system shall support the data to be transmitted to IoT platform with strict timing and packet loss requirements, determined by the application(s).  | Not<br>Implemented                                  |  |
| CMR-0017<br>See REQ-2017-<br>0001R03 | The oneM2M system shall support the data to be transmitted from IoT platform to subscribed devices with highest priority, with strict timing and packet loss requirements, determined by the application(s).   | Not<br>Implemented                                  |  |

### Table 12: Communication Management Requirements

| CMR-0018         The oneM2M System shall be able to detect and report the missing data in time<br>series, for each source of time sensitive data which is sent to the IoT platform.         Implemente<br>in Rel-2           0001R03         CMR-0019         The oneM2M System shall be able to detect and report the missing data in time<br>series, for each time sensitive application receiving data. ### 6.8 LWM2M Interworking Requirements

## Table 13: LWM2M Interworking Requirements

| Requirement ID | Description   | Release     |
|----------------|---|-------------|
| LWM2M-001      | The oneM2M System shall provide the capability to transparently transport     | Implemented |
| See REQ-2015-  | LWM2M Objects between LWM2M Clients and M2M Applications.                     | in Rel-2    |
| 0517R04        |   |             |
| LWM2M-002      | The oneM2M System shall provide the capability to translate LWM2M Objects     | Implemented |
| See REQ-2015-  | into a semantic representation of the LWM2M Object as oneM2M resources.       | in Rel-2    |
| 0517R04        |   |             |
| LWM2M-003      | The oneM2M System shall provide the capabilities of the LWM2M Server in       | Implemented |
| See REQ-2015-  | order to interwork between LWM2M Clients and M2M Applications.                | in Rel-2    |
| 0517R04        |   |             |
| LWM2M-004      | The oneM2M System shall provide the capability for M2M Applications to        | Implemented |
| See REQ-2015-  | discover LWM2M Clients using the LWM2M Client's Endpoint Name.                | in Rel-2    |
| 0517R04        |   |             |
| LWM2M-005      | When transparently transporting LWM2M Objects, the oneM2M System shall        | Not         |
| See REQ-2015-  | provide the capability for M2M Applications to discover the defining of LWM2M | implemented |
| 0517R04        | Objects transported by the oneM2M System.                                     |             |
| LWM2M-006      | When interworking with LWM2M Objects, the oneM2M System shall provide the     | Implemented |
| See REQ-2015-  | capability for M2M Applications to discover a LWM2M Object using the LWM2M    | in Rel-2    |
| 0517R04        | Object's identifier.  |             |
| LWM2M-007      | The oneM2M System shall provide capability to onboard devices that            | Implemented |
| See REQ-2015-  | incorporate a LWM2M Client.   | in Rel-2    |
| 0517R04        |   |             |
| LWM2M-008      | The oneM2M System shall provide the capability to interoperate the underlying | Implemented |
| See REQ-2015-  | security mechanisms of the LWM2M Client with the security capabilities        | in Rel-2    |
| 0517R04        | provided by the oneM2M System.  |             |

### 7

# Non-Functional Requirements (informative)

This clause is intended to gather high-level principles and guidelines that shall govern the design of the oneM2M System. Such principles and guidelines are fundamental to the design of the oneM2M System. But as they cannot necessarily be expressed as requirements per se, they shall be introduced and expressed in this clause.

#### **Table 14: Non-Functional Requirements**

| Requirement ID | Description  | Release                 |
|----------------|--|-------------------------|
| NFR-001        | Continua Health Alliance is incorporating a RESTful approach to its design. To support CHA, oneM2M should consider RESTful styles and approaches while designing the M2M architecture. | Implemented in<br>Rel-1 |
| NFR-002        | The oneM2M System should communicate using protocols that are efficient in terms of amount of exchanged information over amount of exchanged data measured in bytes.                   | Implemented in<br>Rel-1 |

# Annex A (informative): Requirements for the next release

The requirements contained in this Annex are gathered and targeted for the next release of oneM2M.

- 1 Functional Requirements
  - 1.1 Overall System Requirements
  - 1.2 Management Requirements
  - 1.3 Semantics Requirements
    - 1.3.1 Ontology Related Requirements
    - 1.3.2 Semantics Annotation Requirements
    - 1.3.3 Semantics Query Requirements
    - 1.3.4 Semantics Mashup Requirements
    - 1.3.5 Semantics Reasoning Requirements
    - 1.3.6 Data Analytics Requirements
  - 1.4 Security Requirements
  - 1.5 Charging Requirements
  - 1.6 Operational Requirements
  - 1.7 Communication Management Requirements
  - 1.8 LWM2M Interworking Requirements
